

THE LIFETIME FREEDOM BUDGET

人生自由账单

A Universal Long-Term Financial Framework

一个任何成年人都可以使用的长期财务框架

Chuanyan Liu / Elowen

Public Bilingual Edition | English First, Chinese Line-by-Line

公开双语版 | 英文在前，中文逐句对应

Completion time: September 5, 2026, 21:13 PDT (California) / September 6, 2026, 12:13 CST (Beijing)

完成时间：2026 年 9 月 5 日 21:13 PDT（美国加州）/ 2026 年 9 月 6 日 12:13 CST（北京）

Introduction

引言

Many people know how much they earn each month, but have never seriously calculated another number:

很多人知道自己一个月赚多少钱，却从来没有认真算过另一个数字：

How much money do I actually need for my lifetime?

我这一生，到底需要多少钱？

Here, “need” does not mean the minimum cost of survival, and it is not a universal wealth target.

这里的“需要”，不是最低生存成本，也不是某种统一的财富标准。

It means the amount of resources required to sustain a life you can genuinely accept and would willingly maintain over time, while preserving enough room to choose.

它指的是：按照自己真正能够接受、并且希望长期维持的生活方式，一个人需要多少资源，才能拥有足够的选择权。

There is no single correct answer.

每个人的答案都不同。

Some people prefer major cities, some prefer lower-cost places, some travel frequently, some value a quiet home, and some want to keep working for life.

有人喜欢住大城市，有人更愿意住在生活成本较低的地方；有人旅行很多，有人最大的快乐是安静地待在家里；也有人希望一直工作。

Instead of asking how much money a person “should” have, this framework starts with a more useful question:

因此，与其讨论一个人“应该有多少钱”，不如先从一个更有用的问题开始：

What does my own life actually cost?

我自己真正想过的人生，到底需要多少钱？

01 | Start With Essential Living Costs

先算基础生活成本

Start with one month.

第一步，先统一按“每月”计算。

Do not begin with retirement, investment returns, or distant future scenarios.

不要一开始就算退休、投资收益或几十年后的情景。

First answer one question: how much does it cost to maintain a safe and functional version of my current life?

先回答一个问题：维持当前安全、正常运转的生活，一个月到底需要多少钱？

Housing

住房

- Rent or mortgage
 - 房租或房贷
- Property tax, HOA or building fees
 - 房产税、HOA 或物业费
- Repairs and maintenance
 - 维修与维护
- Home or renters insurance
 - 住房或租客保险

Food

饮食

- Groceries
 - 日常采购
- Dining out and delivery
 - 外食与外卖
- Coffee, drinks and work meals
 - 咖啡饮品与工作餐
- Special dietary needs
 - 特殊饮食需求

Transportation

交通

- Public transportation and ride-hailing
 - 公共交通与打车
- Vehicle payment, fuel or charging
 - 车辆付款、油费或充电
- Insurance, parking and maintenance
 - 保险、停车与保养
- Replacement and depreciation allowance
 - 车辆更换与折旧预留

Personal and recurring expenses

个人与固定支出

- Clothing and personal care
 - 衣物与个人护理
- Health, fitness and routine wellness
 - 健康、健身与日常健康管理
- Utilities, internet and mobile service
 - 水电燃气、网络与手机
- Daily necessities and basic subscriptions
 - 日用品与基础订阅

Essential monthly living cost = _____

基础月生活成本 = _____

02 | Calculate the Life You Actually Want

再算真正想过的生活

Being able to live and wanting to live that way are not the same thing.

“能生活”和“想这样生活”是两回事。

Ask what your life would look like if you did not have to repeatedly sacrifice meaningful experiences for small savings.

可以问自己：如果不需要为了省小钱反复牺牲重要体验，我真正喜欢的生活是什么样？

Travel

旅行

- Trips per year and average trip length
 - 每年旅行次数与平均天数
- Domestic or international travel
 - 国内或国际旅行

- Transportation and accommodation standard
 - 交通与住宿标准
- Food, activities and local transportation
 - 餐饮、体验活动与当地交通

Annual travel budget ÷ 12 = Average monthly travel cost

全年旅行预算 ÷ 12 = 平均月旅行成本

Interests and recreation

兴趣与娱乐

- Sports, gaming, music, photography or outdoor activities
 - 体育、游戏、音乐、摄影或户外活动
- Shows, exhibitions, courses or social activities
 - 演出、展览、课程或社交活动
- Equipment and materials for personal interests
 - 兴趣设备与相关材料

Quality-of-life and aesthetic spending

品质与审美消费

- Clothing, accessories and personal style
 - 服装、配饰与个人风格
- Home, design objects, art or collectibles
 - 家居、设计品、艺术品或收藏
- Vehicles or other personally meaningful premium purchases
 - 车辆或其他对个人有意义的高品质消费

No one else needs to decide what is “worth it” for you.

不需要别人替你定义什么才“值得”。

The purpose is to record your real preferences honestly.

这里只需要诚实记录自己的真实偏好。

Buying back time

购买时间

- Cleaning and laundry
 - 保洁与洗衣
- Delivery, moving and repair services
 - 配送、搬家与维修服务
- Administrative support or other convenience services
 - 行政协助或其他便利服务

Desired monthly lifestyle cost = Essential living + Travel + Interests + Quality spending + Time-saving services

03 | Include Costs That Do Not Happen Every Month

不要漏掉“不按月发生”的开支

A budget can look artificially low when it only reflects ordinary monthly transactions.

如果预算只看每月普通账单，很容易把真实生活成本算低。

Many expenses are irregular, but still predictable over a long enough period.

很多支出不是每月发生，但拉长时间看，它们依然是可以预期的。

- Phones and computers
 - 手机与电脑更新
- Furniture and appliances
 - 家具与家电
- Moving and renovation
 - 搬家与装修
- Vehicle replacement and major repairs
 - 车辆更换与大型维修
- Professional, legal, accounting or administrative services
 - 专业、法律、会计或行政服务
- Medical costs and insurance deductibles
 - 医疗支出与保险自付额
- Licenses, visas, permits or identity-related administration where applicable
 - 适用情况下的证件、签证、许可或身份行政费用

Expected annual irregular expenses ÷ 12 = Monthly irregular-expense allowance

预计年度不定期支出 ÷ 12 = 月均不定期支出预留

This prevents a person from mistaking a temporarily quiet month for their true long-term cost of living.

这样可以避免把“这个月刚好没发生大额支出”误认为真实长期生活成本。

04 | Separate Your Own Costs From Responsibilities for Others

把“自己”和“需要承担的人”分开计算

Do not hide all family and care responsibilities inside one vague household number.

不要把所有家庭责任都塞进一个模糊的家庭总数。

Create separate modules so each life decision can be added or removed without breaking the entire model.

建议分别建立模块，这样未来人生选择发生变化时，可以单独增减，而不用推翻整套模型。

- Yourself
 - 自己

- Partner, if applicable
 - 伴侣，如适用
- Children, if applicable
 - 子女，如适用
- Parents or other family members, if applicable
 - 父母或其他家庭成员，如适用
- Pets, if applicable
 - 宠物，如适用

If you only want to know how much freedom costs for you as one person, calculate yourself first.

如果目前只想知道“我自己一个人获得自由需要多少钱”，那就先只计算自己。

Other modules can be added later if and when they become relevant.

其他模块可以在未来真正相关时再逐项加入。

05 | Separate Historical Debt From Future Living Costs

把旧账从未来生活中剥离出来

Past debt is a stock problem; ongoing living expenses are a cash-flow problem.

过去产生的债务属于存量问题；未来生活属于长期现金流问题。

They should be calculated separately.

两者应该分开计算。

- Student loans
 - 学生贷款
- Credit-card balances
 - 信用卡债务
- Personal loans
 - 个人贷款
- Medical debt
 - 医疗欠款
- Tax debt
 - 税务欠款
- Other historical obligations
 - 其他历史债务

One-time debt-clearance amount = _____

一次性清账金额 = _____

This lets you distinguish between “my lifestyle is expensive” and “I still have historical obligations to clear.”

这样你能清楚区分：“我的生活到底贵不贵？”和“我过去还有多少账没有处理？”

06 | Build a Safety Reserve

建立安全现金池

Ask: if my income stopped tomorrow, how long would I want to remain able to make decisions without panic?

接下来问：如果收入明天突然中断，我希望自己多久以内不用因为恐慌而做决定？

A safety period could be three, six, twelve, twenty-four months, or another period that fits your circumstances.

安全期可以是 3 个月、6 个月、12 个月、24 个月，或者其他更适合自己的周期。

Safety reserve = Necessary monthly cost × Number of protected months

安全现金池 = 月必要生活成本 × 无收入安全月数

Additional reserves may be created for medical events, relocation, legal needs, family emergencies, entrepreneurship failure, or career transitions.

还可以另外设置医疗、搬迁、法律、家庭突发事件、创业失败或职业转换等专项缓冲。

The goal is not to find one universal emergency-fund number.

这里的重点不是寻找一个所有人都通用的应急金数字。

The goal is to know how much liquidity preserves your ability to choose when something unexpected happens.

真正重要的是知道：多少钱能够让自己在意外发生时依然拥有选择。

07 | Build at Least Three Versions of Life

至少建立三套生活版本

A single budget can create unnecessary anxiety because real life has different operating modes.

只算一种生活方式很容易制造不必要的焦虑，因为现实人生本来就有不同运行模式。

Version A - Foundation

Version A | 基础线

A safe, healthy and dignified life during a temporary income interruption.

收入短期中断时，也能维持安全、健康和基本生活品质。

Version B - Comfortable

Version B | 舒适线

A normal life without repeatedly making decisions around small expenses.

正常生活，不需要频繁为了小额支出做取舍。

Version C - Freedom

Version C | 自由线

A life where housing, travel, interests and time can be arranged largely according to personal preference.

能够按照自己真正喜欢的方式安排住房、旅行、兴趣和时间。

Life Version 生活版本	Monthly Cost 月成本	Annual Cost 年成本
Foundation / 基础线	_____	_____
Comfortable / 舒适线	_____	_____

Freedom / 自由线	_____	_____
---------------	-------	-------

These three numbers are usually more useful than a vague statement such as “I want financial freedom.”
这三个数字，通常比一句模糊的“我要财务自由”更有用。

08 | Add Geography as a Variable

加入地理变量

The cost of the same life can vary dramatically across cities and countries.
同一种生活，在不同城市和国家，成本可能相差非常大。

Build separate versions for the locations you might realistically choose.
可以为自己真正可能选择的不同地点分别建立版本。

- Housing
 - 住房
- Food
 - 饮食
- Transportation
 - 交通
- Healthcare
 - 医疗
- Service costs
 - 服务成本
- Taxes
 - 税负
- Education or family-support costs, if relevant
 - 教育或家庭支持成本，如适用

Some expenses may be less sensitive to geography, such as international travel, globally priced products, certain electronics, and cross-border professional services.
另一些消费对地域不那么敏感，例如国际旅行、全球统一定价较强的产品、部分电子设备和跨境专业服务。

Changing where you live can therefore be another way to change the cost of freedom.
所以，改变生活地点，本身也可以改变人生自由成本。

Increasing income is one solution; reducing the cost required to achieve the same desired life is another.
提高收入是一种解法；降低实现同一种理想生活所需要的成本，也是。

09 | Choose the Planning Horizon

确定你真正要规划多少年

Only after the monthly and annual layers are clear should you expand the model across decades.
只有在月度和年度成本已经清楚以后，才适合把模型延伸到几十年。

Choose a planning horizon such as twenty, thirty, forty or fifty years.

可以选择未来 20 年、30 年、40 年或 50 年等规划周期。

Annual living cost × Planning years + One-time obligations + Safety reserve = Raw lifetime cash requirement

年生活成本 × 规划年数 + 一次性历史负担 + 安全现金池 = 原始人生现金需求

This is deliberately a rough static number.

这是一个刻意保持简单的静态粗算。

Its purpose is to turn “How much do I need?” from a feeling into a visible range.

它的意义，是第一次把“我到底需要多少钱”从感觉变成一个可见的数字区间。

10 | Add Inflation

加入通胀

A long-term model should not assume that one unit of money will buy the same amount decades from now.

长期模型不能默认今天的一单位货币，几十年后仍然可以买到同样的东西。

Run multiple scenarios instead of pretending one forecast is certain.

更好的方法是做多个情景，而不是假装某一个预测一定正确。

- 0% - Static-price reference case
- 0% - 静态价格参考情景
- 2% - Lower long-term inflation assumption
- 2% - 较低长期通胀假设
- 3% - Moderate assumption
- 3% - 中等假设
- Higher inflation - Stress test
- 更高通胀 - 压力测试

The goal is not perfect prediction.

这里的目标不是预测得绝对准确。

The goal is to avoid planning an entire life using only today's prices.

真正重要的是：不要只用今天的价格去计算整个人生。

11 | Add Investment and Asset Returns

加入投资与资产收益

At this stage the question changes.

到这里，问题开始发生变化。

Instead of asking only “How much money will I need?”, ask “Does all of it need to come from labor income?”

不要只问“我这一生需要多少钱？”，还要问“这些钱需要全部由劳动收入产生吗？”

Scenario 1 - No investment return assumed

情景一 | 完全不计算投资收益

This is the most conservative reference case.

这是最保守的参考情景。

Scenario 2 - Conservative investment assumptions

情景二 | 保守投资情景

Use a return assumption appropriate to your own assets, taxes, fees and risk tolerance.

根据自己的资产类别、税费、成本与风险承受能力选择合适的假设。

Scenario 3 - Neutral / middle case

情景三 | 中性情景

Use this to observe how long-term compounding may change the amount of labor income required.

用于观察长期复利可能如何改变劳动收入需求。

Scenario 4 - High-risk assets or entrepreneurship

情景四 | 高风险资产或创业

Always calculate a success case, an ordinary case and a failure case.

这一类一定同时计算成功情景、普通情景和失败情景。

Do not build a life plan using only the most attractive outcome.

不要只用最漂亮的结果来规划整个人生。

12 | Work Backward From the Number of Years You Want to Work Intensively

反推“我到底需要高强度工作多久”

Write down your current age and the age at which you would like high-intensity work to become optional.

写下当前年龄，以及你希望从哪个年龄开始，高强度工作可以变成一种选择而不是必须。

High-intensity earning window = Target age - Current age

高强度赚钱窗口 = 目标年龄 - 当前年龄

Then calculate how much net wealth must actually be accumulated each year.

然后反推：每年真正需要积累多少净财富。

This is different from gross salary or total compensation.

这和税前工资或总包不是一个数字。

Taxes, current living costs, debt service and other necessary spending still have to be paid.

税、当前生活成本、债务和其他必要支出仍然需要支付。

The key metric = Annual increase in net wealth

真正值得关注的指标 = 年度净财富增量

13 | Do Not Treat Salary as the Only Source of Income

收入也不要只看工资

Linear income

线性收入

- Salary
 - 工资
- Hourly fees
 - 小时费
- Consulting fees
 - 咨询费
- Project fees
 - 项目费

Semi-linear income

半线性收入

- Bonuses
 - 奖金
- Commission
 - 佣金
- Success fees
 - 成功费
- Project or profit sharing
 - 项目分成或利润分享

Nonlinear income

非线性收入

- Equity or business ownership
 - 股权或企业所有权
- Intellectual-property licensing and royalties
 - 知识产权授权与版税
- Long-term revenue sharing
 - 长期收益分成
- Asset appreciation and investment returns
 - 资产升值与投资收益
- Business sale or liquidity events
 - 企业出售或其他流动性事件

Wealth creation = Labor income + Project income + Ownership income + Asset returns + Other nonlinear income

$$\text{财富创造} = \text{劳动收入} + \text{项目收入} + \text{所有权收入} + \text{资产收益} + \text{其他非线性收益}$$

This is a more complete model than simply multiplying salary by years worked.

这比简单使用“工资 × 工作年数”更完整。

14 | Convert Large Opportunities Into Life Time

把大额收入换算成“人生时间”

When a large after-tax payment or opportunity appears, do not look only at the nominal amount.

当一笔较大的税后净收入或机会出现时，不要只看它名义上是多少钱。

Convert it into the amount of life it can finance.

把它换算成它能够支持多少人生时间。

$$\text{After-tax one-time income} \div \text{Annual freedom-lifestyle cost} = \text{Years of freedom funded}$$

$$\text{税后一次性净收入} \div \text{年自由生活成本} = \text{这笔收入对应的自由年数}$$

You can also divide it by your foundation, comfortable and freedom monthly costs.

也可以分别除以自己的基础月成本、舒适月成本和自由月成本。

This makes money more tangible: how many months of life does it buy back, how many years of work can become optional, and what percentage of the long-term target does it complete?

这样看钱会更有实感：它可以买回多少个月的生活、可以让多少年的工作变成可选项、又完成了长期目标的百分之多少？

15 | Reduce the Entire Model to Five Numbers

最后只需要记住五个数字

1. My foundation monthly cost: _____

1. 我的基础月成本：_____

2. My comfortable monthly cost: _____

2. 我的舒适月成本：_____

3. My freedom monthly cost: _____

3. 我的自由月成本：_____

4. The net assets required if I want labor income to become optional: _____

4. 如果希望劳动收入变成可选项，我需要多少净资产：_____

5. If I plan to work intensively for only X more years, how much wealth must I actually accumulate each year?: _____

5. 如果只准备再高强度工作 X 年，每年需要真正积累多少财富？：_____

These numbers can inform decisions about work, entrepreneurship, relocation, compensation, risk, large opportunities and how long you actually need to keep working.

这几个数字会直接影响工作、创业、迁居、薪酬、风险、大额机会以及自己究竟还需要工作多久等人生决策。

The Core Formula

核心总公式

Freedom gap = Future lifestyle needs + Historical obligations + Safety buffer - Current usable net assets - Reasonably expected future asset income - Other dependable income

人生自由缺口 = 未来生活需求 + 一次性历史负担 + 安全缓冲 - 当前可用净资产 - 可合理预计的未来资产收益 - 其他确定性收入

Freedom gap ÷ Years you are willing to keep working intensively = Wealth that must be created and retained each year

人生自由缺口 ÷ 愿意继续高强度工作的年数 = 每年真正需要创造并留下的财富

Closing Thought

最后

This framework is not designed to tell everyone that they need more money.

这套计算不是为了告诉所有人：“你需要很多钱。”

It is not designed to tell everyone to spend less either.

它也不是为了告诉所有人：“你应该省钱。”

It is designed to answer a more basic question:

它真正解决的是一个更基础的问题：

What kind of life do you actually want?

你到底需要什么样的人生？

One person may value a large home; another may only need a quiet room.

有人需要很大的房子；有人只需要一个安静的小房间。

One person may value travel; another may value collecting, family time, creative work, community, or simply more unstructured time.

有人最大的快乐来自旅行；也有人看重收藏、家庭时间、创作、社区，或者只是更多不被安排的时间。

There is no universal answer.

这些都没有统一答案。

Financial freedom should therefore not have one universal number.

所以财务自由也不应该只有一个统一数字。

The useful question is not “How much money do other people have?”

真正值得计算的不是：“别人有多少钱？”

The useful question is: “How much is enough to support the life I genuinely want?”

而是：“多少钱，足够支撑我自己真正想过的人生？”

Calculate that number first.

先把这个数字算出来。

Only then decide how you want to obtain it.

剩下的问题，才是你想用什么方式获得它。

Important Financial Disclaimer

重要财务声明
